

Attorney Docket No.: 095309.52897US
Application No. 10/701,079

REMARKS

Applicants through their attorney wish to thank Examiner Miller for the courtesies extended through during April 14, 2005 personal interview, during which claim 13 was discussed.

In accordance with the course of action discussed with Examiner Miller, the above-identified application has been withdrawn from issue and a new claim 13 has been added which corresponds essentially to the claim discussed during the personal interview in order to define over the reference to Weinbrenner (U.S. Patent No.: 6,774,600) previously cited. More particularly, new claim 13 defines over Weinbrenner by providing two output stages for each line (row or column) in order to provide that motors can be subjected to an additional voltage below zero, so that they can rotate in an opposite direction whereby these electric motors can be operated in either one direction or the other. On the other hand, the reference to Weinbrenner has only one output stage (302-307) for each row/column line.

Another distinguishing feature of the claimed invention defined by independent claim 13 is the recitation that each electric motor is connected to only one of the intersections of points formed by the rows and columns. The reference Weinbrenner is connected to two intersections (R1, C1 and R2, C1).

Therefore, Applicants respectfully request that this application, containing previously allowed claims 1-7 and newly added claim 13, be once again allowed and passed to issue.

If there are any questions regarding this Amendment or the application in general, a telephone call to the undersigned would be appreciated since this should expedite the prosecution of the application for all concerned.
